About Field

F/ELD

Field is a technology company founded in 2015, driven by the idea that equality, progress, growth, and sustainability all start with access to healthcare for the people who need it most.

Since Field Supply was launched in 2016, we've helped to digitize, modernise, and sustain the supply chains that enable healthcare access. It is a fully-featured, enterprise-grade LMIS, designed with an intimate understanding of the unique challenges faced in frontier health systems.

With proven success in revolutionizing the pharmaceutical supply chain for public health programmes, Field introduced Shelf Life to the Nigerian corner pharmacy market. Shelf Life, a data-driven pharma distribution service for community pharmacies, began operation in 2017 in Nigeria, and expanded operations to Kenya in 2018.

With a demonstrated market fit in East and West Africa, with proven business models and impact, we're now focused on scaling Shelf Life to seize the opportunity across Africa's growing pharma market.

TIMELINE

Founded October 2015

Field Supply launched in 2016

Shelf Life starts in Nigeria in 2017

Expansion in Kenya in 2018

malaria

25.1M

immunization

16.3M

family planning

6.3M

HIV-AIDS

8.7M

maternal & newborn

5.3M

tuberculosis

584K

Shelf Life

2,500

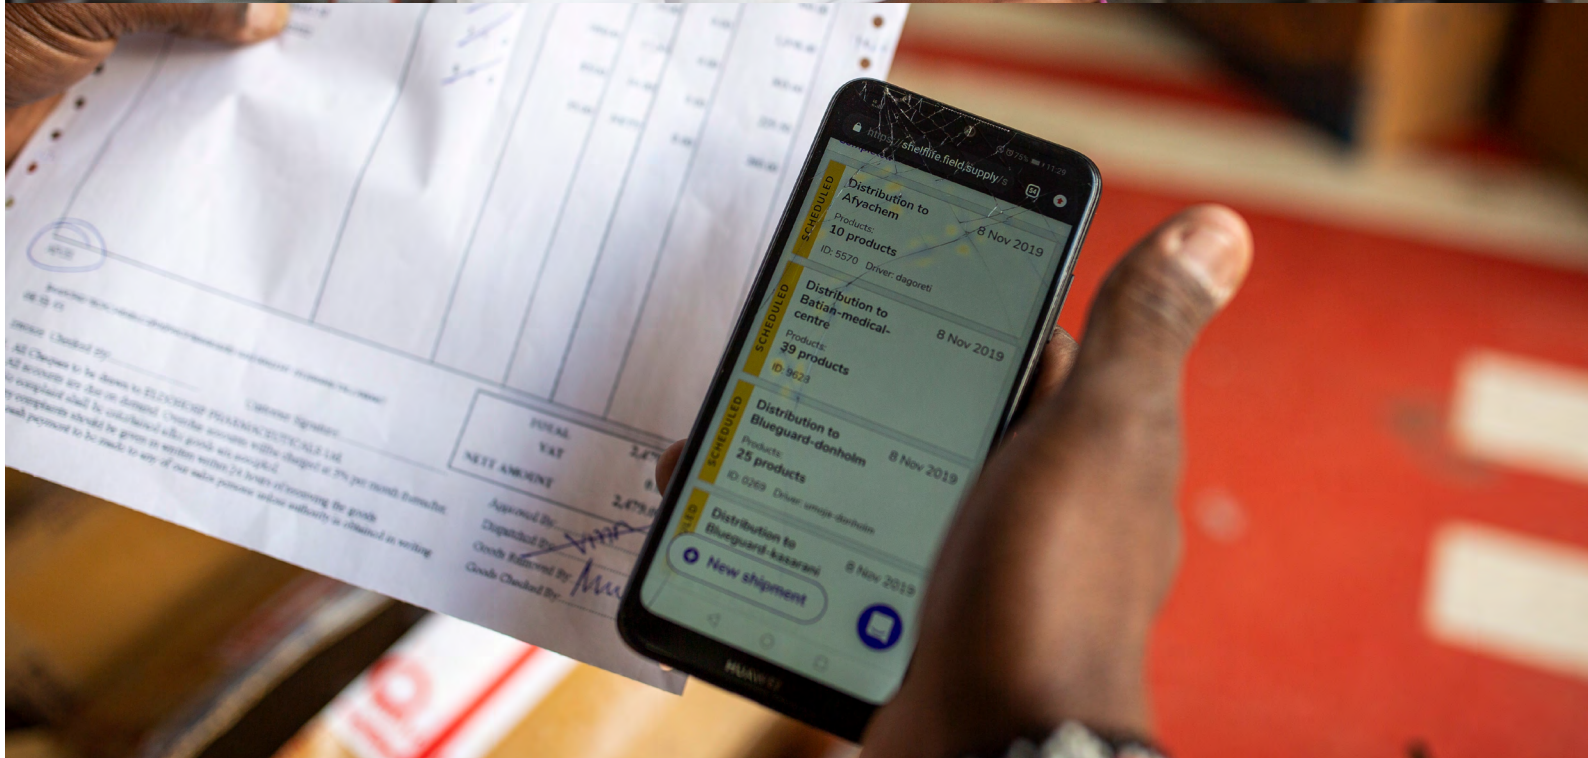

medical products

35,000+

service delivery points

Why Field Supply?

True offline-first workflow-support provides unprecedented visibility and control over the supply chain in low-resource settings. Control Tower-as-a-Service for large scale health programmes connects logistics data with external systems such as HMIS, to put powerful and practical analytics in the hands of health programme and supply chain managers.

Functional Design

Rethinking complex functionality for low-tech, poorly connected contexts from the ground up.

Built for Real People

Designed and built to support best-practice processes for effective management and institutionalisation.

Enterprise-grade

Safe, secure, auditable data infrastructure; cloud native and built for national scale.

Insight & Data Analytics

Powerful tools for data mining, monitoring & evaluation, and continuous improvement.

Proven Track Record

Worked with some of the most important health programs in underserved communities alongside public and private health workers.

Easy To Set Up & Seamless To Incorporate

Instantly available to all users in your supply chain without custom hardware rollouts or lengthy installations. Customize with your supply chain data and business rules, and provide all users easy access on any smart device and laptop.

The background is a solid coral color. It features a faint, stylized illustration of a person in a field. The person is wearing a wide-brimmed hat and a long coat, and is holding a staff or walking stick. In the upper right corner, there is a small globe with a dotted texture. In the lower right corner, there is a stylized plant with long, thin leaves. The overall style is minimalist and modern.

Field Supply Features

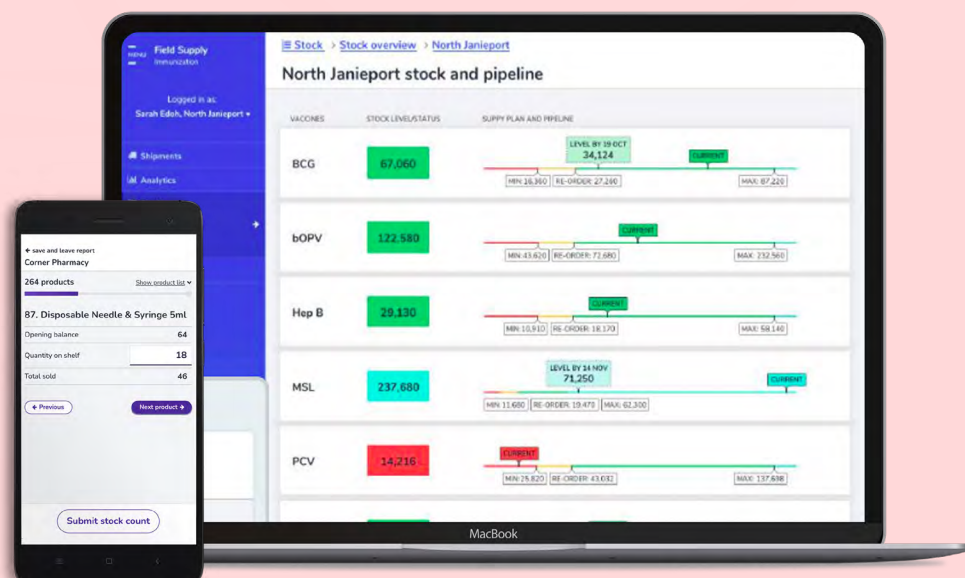

Field Supply Features

Field Supply was designed to be accessible by everyone in your supply chain, featuring offline capability, mobile-friendly design, guided workflows, and clear and actionable dashboards. Field Supply ensures that everyone in your supply chain – from a community health worker with just a smartphone and an unreliable cellular connection, to a fully-equipped and trained data manager – is informed and empowered to make critical decisions.

Effective inventory management

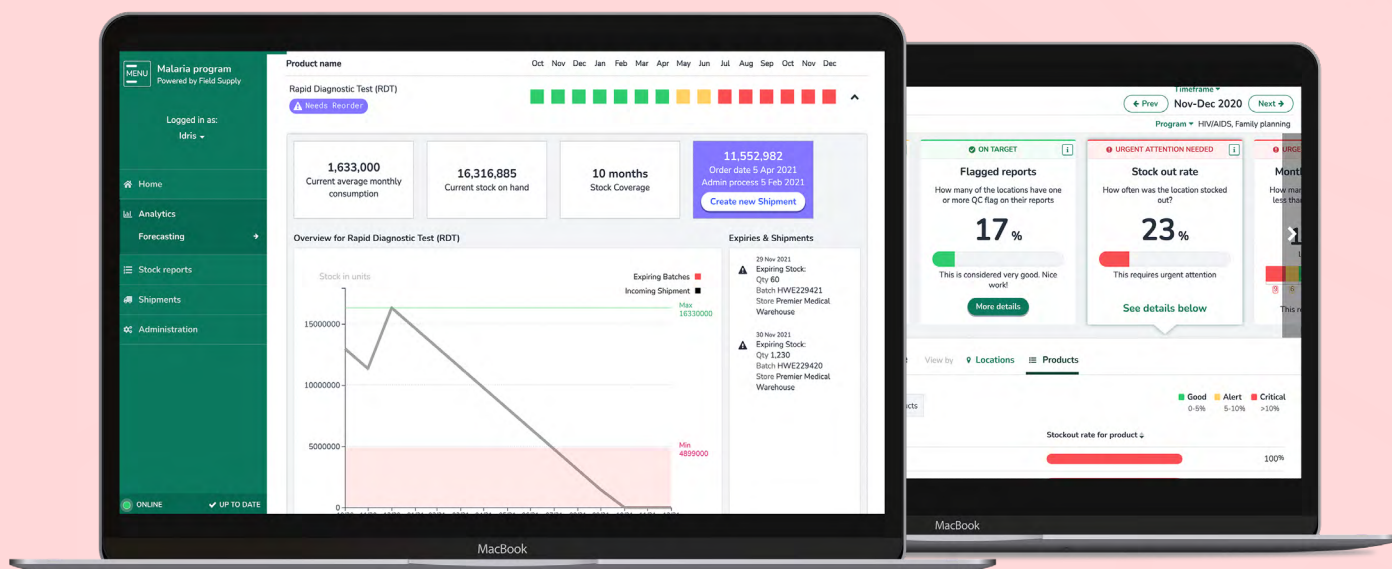

Comprehensive and configurable stock reporting capabilities ensure accurate stock data across the entire supply chain, from warehouses to service delivery points.

Trace stock movements on a real-time transactional basis or via periodic reporting. Safeguard stock potency with expiration reporting and analytics, and custom data points such as Vaccine Vial Monitor status.

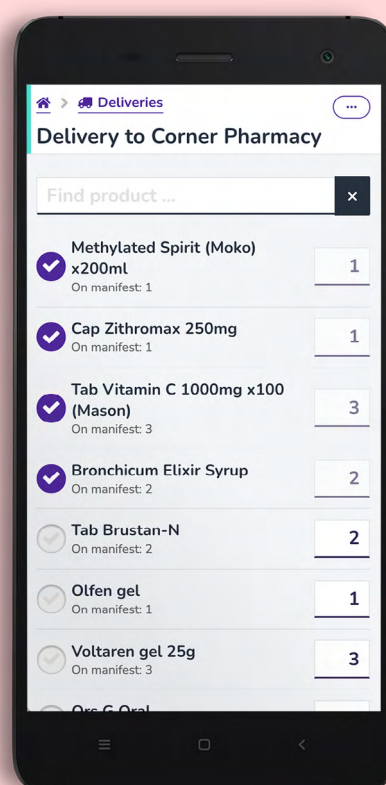

Analytics and Insight

In-built control tower analytics ensure managers have all the information and insights they need to make informed supply chain decisions. All high-level and aggregate data can be filtered, disaggregated and “drilled down” on to locate problems or discrepancies.

Fulfilment

Field Supply provides mobile tools for deliveries, or integrates with third party electronic delivery systems to provide real-time data on movement of commodities between warehouses and from warehouses to the health facilities that need them.

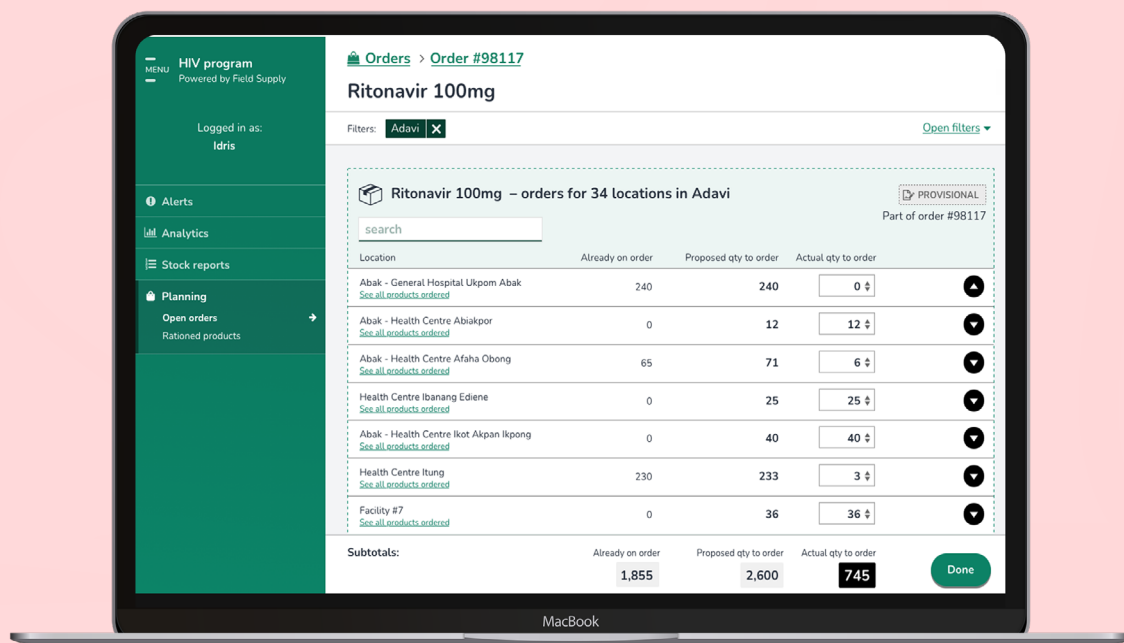

Data Quality Checks

Ensure data accuracy with powerful monitoring tools. Automatically flag inaccurate or unusual stock usage for program managers to monitor and resolve.

Supply Planning & Procurement

Accurately supply plan calculations to maintain optimal stock can be made using multi-tier, multi-program, and multi-donor allocations. Forecasts are automatically derived from real-time inventory data and a range of forecasting methodologies including time-series and custom rules-based demand prediction.

Supply planning can be integrated with warehouse infrastructure to forecast stock availability and procurement needs against existing supplies, incoming shipments and expirations.
